

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A system comprising:

~~an interface of a target application in a device~~ an image forming device including an operation panel, the ~~interface~~ operation panel comprising a plurality of operations to be selected by a user;

a monitoring unit configured to monitor data of selecting of the plurality of operations of the ~~interface~~ operation panel by the user, and to generate a log of the monitored data, the log of the monitored data being in a form of a map mapping each of key data in a key portion of the map to respective value data in a corresponding value data portion;

a communicating unit configured to receive the log of the monitored data, and to communicate the log of the monitored data, and

wherein the monitoring unit and communicating unit are self-contained in the image forming device, ~~and wherein the target application is self-contained in the device~~ prior to any initial external communication connection by the communication unit, and the monitoring unit is configured to generate the log of the monitored data without any initial external communication connection by the communicating unit.

Claims 2-4 (Canceled).

Claim 5 (Currently Amended): A system according to Claim 1, wherein the communicating unit sends the log of the monitored data when the user exits operating the target application image forming device.

Claim 6 (Currently Amended): A system according to Claim 1, further comprising a setting unit configured to set a number of sessions of the ~~target application~~ image forming device to be executed by the user prior to the communicating unit communicating the log of the monitored data.

Claim 7 (Original): A system according to Claim 1, wherein the key data and the value data in the map both contain string data.

Claim 8 (Previously Presented): A system according to Claim 7, wherein the value data portion includes plural vectors in which each vector includes an array of strings.

Claim 9 (Currently Amended): A system according to any one of Claims ~~4-8~~ 5-8, wherein the communicating unit communicates the log of the monitored data by Internet mail.

Claim 10 (Currently Amended): A system comprising:
~~interface means of a target application means in a~~ an image forming device including an operation panel, the ~~interface means for operation panel~~ providing a plurality of operations to be selected by a user;

monitoring means for monitoring data of selecting of the plurality of operations of the ~~interface means operation panel~~ by the user, and for generating a log of the monitored data, the log of the monitored data being in a form of a map mapping each of key data in a key portion of the map to respective value data in a corresponding value data portion;

communicating means for receiving the log of the monitored data, and for communicating the log of the monitored data, and

wherein the monitoring means and communicating means are self-contained in the image forming device, ~~and wherein the target application is self-contained in the device~~ prior to any initial external communication connection by the communicating means, and the monitoring means generates the log of the monitored data without any initial external communication connection by the communicating means.

Claims 11-13 (Canceled).

Claim 14 (Currently Amended): A system according to Claim 10, wherein the communicating means sends the log of the monitored data when the user exits operating the ~~target application means~~ image forming device.

Claim 15 (Currently Amended): A system according to Claim 10, further comprising a setting means for setting a number of sessions of the ~~target application means~~ image forming device to be executed by the user prior to the communicating means communicating the log of the monitored data.

Claim 16 (Original): A system according to Claim 10, wherein the key data and the value data in the map both contain string data.

Claim 17 (Previously Presented): A system according to Claim 16, wherein the value data portion includes plural vectors in which each vector includes an array of strings.

Claim 18 (Currently Amended): A system according to any one of Claims ~~10-17~~
14-17, wherein the communicating means communicates the log of the monitored data by
Internet mail.

Claim 19 (Currently Amended): A method of monitoring usage of ~~an interface of a~~
~~target application in a~~ an image forming device including an operation panel, the ~~interface~~
operation panel including a plurality of operations to be selected by a user, comprising the
steps of:

monitoring data of selecting of the plurality of operations of the ~~interface~~ operation
panel by the user;

generating a log of the monitored data, the log of the monitored data being in a form
of a map mapping each of key data in a key portion of the map to respective value data in a
corresponding value data portion; and

receiving the log of the monitored data, and communicating the log of the monitored
data to a communication unit, and

wherein the monitoring and generating steps are performed in the image forming
device and are performed without any initial external communication connection by the
communicating unit, ~~and the target application is self-contained in the device~~ prior to any
initial external communication connection by the communication unit.

Claims 20-22 (Canceled).

Claim 23 (Currently Amended): A method according to Claim 19, wherein the
communicating step sends the log of the monitored data when the user exits operating the
~~target application~~ image forming device.

Claim 24 (Currently Amended): A method according to Claim 19, further comprising ~~a step of~~ setting a number of sessions of the ~~target application~~ image forming device to be executed by the user prior to the communicating device communicating the log of the monitored data.

Claim 25 (Original): A system according to Claim 19, wherein the key data and the value data in the map both contain string data.

Claim 26 (Previously Presented): A system according to Claim 25, wherein the value data portion includes plural vectors in which each vector includes an array of strings.

Claim 27 (Currently Amended): A method according to any one of Claims ~~19-26~~ 23-26, wherein the communicating step communicates the log of the monitored data by Internet mail.

Claim 28 (Currently Amended): A computer program product comprising:
a computer storage medium and a computer program code mechanism embedded in the computer storage medium for causing a computer to monitor a user's usage of ~~an interface of a target application in a~~ an operation panel of an image forming device, the ~~interface~~ operation panel comprising a plurality of operations to be selected by a user, comprising:

a first computer code device configured to monitor data of selecting of the plurality of operations of the ~~interface~~ operation panel by the user, and configured to generate a log of the monitored data, the log of the monitored data being in a form of a map mapping each of key

data in a key portion of the map to respective value data in a corresponding value data portion;

a second computer code device configured to receive the log of the monitored data, and to communicate the log of the monitored data to a communication unit, and

wherein the first computer program code executes the monitoring and generating in the image forming device and without any initial external communication connection by the communicating unit, and the target application is self-contained in the device prior to any initial external communication connection by the communication unit.

Claims 29-31 (Canceled).

Claim 32 (Currently Amended): A computer program product according to Claim 28, wherein the second computer code device is further configured to send the log of the monitored data when the user exits operating the ~~target application~~ image forming device.

Claim 33 (Currently Amended): A computer program product according to Claim 28, further comprising a third computer code device configured to set a number of sessions of the ~~target application~~ image forming device to be executed by the user prior to the second computer code device communicating the log of the monitored data.

Claim 34 (Original): A computer program product according to Claim 28, wherein the key data and the value data in the map both contain string data.

Claim 35 (Previously Presented): A system according to Claim 24, wherein the value data portion includes plural vectors in which each vector includes an array of strings.

Claim 36 (Currently Amended): A computer program product according to any one of Claims ~~28-35~~ 32-35, wherein the second computer code device is further configured to communicate the log of the monitored data by Internet mail.
